PHYSICS LETTERS B

A journal devoted to the rapid publication of letters in the fields of *Nuclear Physics* and *Particle Physics*.

Editors: P.M. Endt, *Utrecht*; R. Gatto, *Geneva*; H.M. Georgi III, *Cambridge, MA*; A.D. Jackson, *Stony Brook*; P.V. Landshoff, *Geneva*; C. Mahaux, *Liège*; L. Montanet, *Geneva*; J.P. Schiffer, *Argonne*; K. Winter, *Geneva*.

INSTRUCTIONS TO AUTHORS

Physics Letters B is intended for rapid publication of important new results in nuclear and particle physics. Papers reporting such findings should normally not exceed four journal pages, and be accompanied by an abstract not exceeding 60 words. More detailed instructions are printed at the end of each Volume of Physics Letters B. Manuscripts should be submitted in triplicate (quadruplicate in the case of experimental particle physics), one copy of which is the typewritten original.

Contributions on experimental nuclear physics (excluding intermediate-energy physics and heavy-ion physics, see below) should be sent to:

P.M. Endt (Fysisch Laboratorium, Princetonplein 5, P.O. Box 80.000, 3508 TA Utrecht, The Netherlands),

those of experimental intermediate-energy and heavy-ion physics to:

J.P. Schiffer (Argonne National Laboratory, 9700 South Cass Avenue, Argonne, IL 60439, USA),

those on theoretical nuclear physics from European countries to:

C. Mahaux (Institut de Physique B5, University of Liège, B-4000 Liège, Belgium),

and from countries outside Europe to:

A.D. Jackson (Department of Physics, State University of New York at Stony Brook, Stony Brook, NY 11794, USA).

Contributions on experimental particle physics should be sent to:

L. Montanet and K. Winter (CERN, 1211 Geneva 23, Switzerland),

those on theoretical particle physics from Ireland, United Kingdom, Benelux, Scandinavian countries, German Federal Republic, German Democratic Republic, Poland, Czechoslovakia and the USSR to:

P.V. Landshoff (TH CERN, CH 1211 Geneva, Switzerland (from 1 September 1984 to 31 August 1985)),

from the remaining European countries to:

R. Gatto (CERN, Theory Division, 1211 Geneva 23, Switzerland),

and from countries outside Europe to:

H.M. Georgi III (Department of Physics, Harvard University, Cambridge, MA 02138, USA).

Submitted papers will be refereed and, if necessary, authors may be invited to revise their manuscripts. Proofs will *not* be sent, therefore authors should check their papers carefully before submission. If a submitted paper relies heavily on unpublished material, it would be helpful to have a copy of that material for the use of the referee.

By submitting a paper for publication in Physics Letters the authors imply that the paper has not been published previously nor is being considered for publication elsewhere.

SUBSCRIPTIONS

Sections A and B of PHYSICS LETTERS will each be published weekly. The subscription price of a volume of Physics Letters is Dfl. 220.00 (approx. $ 81.50) plus Dfl. 22.00 (approx. $ 8.15) handling and mailing costs. For 1985 8 volumes Physics Letters A at a total subscription price of Dfl. 1936.00 (approx. $ 717.00) including handling and mailing costs, and 17 volumes Physics Letters B at a total subscription price of Dfl. 4114.00 (approx. $ 1523.50) including handling and mailing costs, are announced.

PHYSICS REPORTS will be published approximately weekly. The subscription price of a volume of Physics Reports is Dfl. 220.00 (approx. $ 81.50) plus Dfl. 22.00 (approx. $ 8.15) handling and mailing costs. For 1985 10 volumes Physics Reports are announced at a total subscription price of Dfl. 2420.00 (approx. $ 896.30) including handling and mailing costs.

The reduced combined subscription price for 25 volumes Physics Letters and 10 volumes Physics Reports is Dfl. 7350.00 (approx. $ 2722.00) including handling and mailing costs.

Subscriptions may be sent to your subscription-agent, bookseller or to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE AMSTERDAM, THE NETHERLANDS.

Claims for missing numbers should be made within two months following the date of publication. The publisher expects to supply missing numbers free only when losses have been sustained in transit and when stock will permit.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

Hard Processes

Volume 1: Phenomenology, Quark-Parton Model

by B.L. IOFFE, V.A. KHOZE *and* L.N. LIPATOV.

1984 360 pages Price: US $92.50/Dfl. 240.00
ISBN 0-444-86213-7

This volume presents a detailed review of the profound theoretical ideas and methods used in the physical interpretation of striking experimental phenomenon in hard lepton-hadron interactions. The quark-parton model is formulated based on the general statement of the eight cone region dominators in the current commutators for deep-inelastic processes. Special attention is paid to the case of polarized particles. The regge-pole method, the vector dominance model and some other traditional approaches are also presented in the work. They offer the possibility of investigating the different cross-sections in some limiting cases.

Each chapter contains a number of practically important problems to be solved by the reader.

CONTENTS: **Chapters**
1. Introduction. A bit of history. **2.** Kinematics and phenomenology. **3.** Space-time description of hard processes. **4.** Sum rules. **5.** Vector meson dominance model. **6.** The parton model. **7.** Experimental data and the parton model. **8.** Heavy lepton.

Light, Volume 1
Waves, Photons, Atoms

by HERMANN HAKEN, *Universität Stuttgart, F.R.G.*

1981 xvi + 354 pages Price: US $36.25/Dfl. 85.00 ISBN 0-444-86020-7

This work, to be published in 3 volumes, provides an introduction to the theory of light and its interaction with matter.
The two volumes to be published later, will cover, respectively, laser physics and non-linear optics. Altogether the three volumes comprise the first *coherent text* to present the full range of modern optics ranging from its fundamental concepts to the generation of coherent light and its most recent physical applications. Starting from a rather elementary level, the book includes a self-contained, concise introduction to the quantum theory of matter and develops in detail the quantum theory of light.
It presents the approaches needed to cope with the various interaction processes between light and matter and illustrates them by various examples.
The final chapters deal with modern methods of quantum statistics, including Langevin and density matrix equations which have become indispensable tools of quantum optics.

CONTENTS: Introduction. Preface. List of Symbols. *Chapters:* 1. What is Light? 2. The Nature of Light: Waves or Particles? 3. The Nature of Matter: Particles or Waves? 4. Response of Quantum Systems to Classical Electromagnetic Oscillations. 5. Quantization of Light Field. 6. Quantization of Electron Wave Field. 7. The Interaction Between Light Field and Matter. 8. Quantum Theory of Coherence. 9. Dissipation and Fluctuations in Quantum Optics.

Vol. II - **Laser Light Dynamics**

In preparation
This volume will deal with laser physics emphasizing laser theory from a physical point of view.

Vol. III - **Nonlinear Optics**

In preparation
This concluding volume will be devoted to the theory of nonlinear processes which arise when laser light interacts with matter.

Quantum Field Theory of Solids

Haken, H.

1983 xvi + 330 p.
US $32.00/Dfl. 75.00
ISBN 0-444-86737-6

This book provides a simple introduction to the concepts and methods of quantum field theory. The concepts dealt with are mainly the so-called elementary excitation, such as phonons, excitons, magnons, polarons, polaritons, and holes. In the course of the book, these concepts are explained systematically and the physical models underlying them are worked out.

"... The author has selected the most important features for presentation so that the quantization of lattice vibrations is shown explicitly in one dimension only as this includes all essential features."

Diffusion and Defect Data

"... this book is one of the best expositions available of nonrelativistic QFT and its solid state applications..."
